

## **Waste Water System - Treatment, Engineering Design, and Operation.**

**Our involvement in industrial waste water treatment goes back to the early federal implementation of environmental standards.** We have designed new wastewater treatment plants and re-designed existing plants to meet discharge permit standards, in various industries.

**One industrial waste water treatment plant we designed in Alabama received the “design award of the year”.**

**Looking “up-stream”, simple process changes can often make production more efficient and productive / competitive, while reducing the environmental impact.**

We have the proven technology to eliminate microbiological / oil fouling of systems, including clarifiers and oil water Separators. Effective microbiological control where necessary improves system efficiency and reduces cost.

**We design and formulate effective chemical treatment programs** to enable your waste water treatment facility to meet discharge standards / requirements.

**We provide on-site training, chemical program implementation, oversight and engineering support.**
